### Brief Description of the Undergraduate Courses taught

1-	Biochemistry 1: The course focuses on the structure and function of glucose, amino acids, fatty acids, proteins, nucleic acids, carbohydrates, enzymes and hormones.
----	--

	Biochemistry 2: The course focuses on metabolism of main components of food including carbohydrates, lipid, and proteins.
2-	<p>Clinical Chemistry 1: This course focuses on the role of clinical chemistry in diagnosis of diseases and explaining terms and units used in clinical chemistry. It covers the reagents preparation and storage, identification and description of different types of specimens used in clinical laboratories. In addition, it provides the student with knowledge about biochemical changes and their association with organ diseases. Moreover, it correlates between functions of these organs and laboratory tests, and metabolism and determination of carbohydrates, vitamins, and proteins.</p> <p>Clinical Chemistry 2: This course provides the student with the knowledge of liver function, kidney function, gastrointestinal tract function (GIT), pancreatic function, tumor markers, toxicology, drug monitoring, vitamins, minerals, trace elements, metabolic and systemic diseases. Studies of hormones, their classification, action, and hormonal assays, also provide the student with advanced knowledge and skills to perform, investigate and diagnose diseases and biochemical change of malignancy, elderly, and pediatrics disorders.</p>
3-	<p>Urinalysis and Body Fluids: This course will provide the students with the skills needed to perform a routine urinalysis and to properly analyze other body fluids commonly encountered in the clinical laboratory. The urinary system, formation of urine, the physical, chemical and microscopic examination of urine are discussed. A detailed study of cellular elements and physical and chemical characteristics of urine are presented and correlated with the structure and physiology of the kidney in normal and diseased states. Also included are specimen collection, preservation of the urine sample and quality control in urinalysis.</p> <p>Analysis of other body fluids include seminal fluid and cerebrospinal fluid.</p>
